

LLM Usage

Well in this project I used LLMS only as a kind of R consultant because I used it a lot when I was stuck with errors and I did not understand what R was trying to tell me so I asked many times why a specific error appeared, what it usually means in R, and what I should check in my own code to solve it by myself, I also asked it to explain some function arguments and test names in simple terms so I can understand what I was doing before running the models.

I also asked, in a very general way, how I could make an existing plot look nicer or also some things about R quarto because I normally use R markdown and in general and i ask how can i enhance things in R or solve errors to make it run correctly.
